SOUTHWEST GAS

Extend a warm welcome

Natural gas infrared patio heaters are essential in creating a year-round outdoor room. When the temperature drops, these patio heaters radiate heat, warming people and objects the same way the sun warms the earth.

Patio heaters are most effective in ranges from 12 to 20 feet and at outdoor temperatures of 50° to 70° F. They provide the best outdoor heating results with the least amount of energy. Already a hit with restaurants and resorts, natural gas infrared patio heaters are your best choice for warming your outdoor living area during the cooler months.

Natural gas infrared patio heaters are easy to maintain. They are available in stationary and portable models and come in a variety of colors. With a quick disconnect, they can use the same gas stub as your gas grill.

Available for residential and commercial properties, patio heaters can be installed to suit nearly any desired location.

Free-standing
Ceiling-mounted
Wall-mounted
No tank to refill
